GooseBuster

Canada goose repeller featuring world's first actual alert and alarm calls, naturally recorded in the wild.

Get rid of geese based on thirty years of science and research in goose vocal communication and behavior. Geese recognize these actual wild geese alarm and alert calls and react instinctively:

- 'Alert' calls indicate uneasiness about potential danger; 'alarm' calls signify immediate danger.
- Geese evacuate without waiting to identify the source.
- Optional selection of coyote bark & gunshot sounds, based on latest research on maximizing success.
- Device automatically prevents acclimation: Calls differ in frequency, duration, and intervals. Sound combinations, sequences and speakers change randomly to give a perception of troubled geese moving through many locations.

Proven effective in university-conducted field studies. Published results, "Efficacy of Recorded Alarm and Alert Calls to repel geese infestation problems", available on request.

Geese are stubborn and territorial, returning year after year. GooseBuster uses their memory against them and scares them away repeatedly so they learn not to return.

GooseBuster is based on decades of research into the behavior and communication of Canada geese by noted biologist Philip Whitford, Capital University Professor. Since 1979, Dr. Whitford has been studying Canada goose behavior and vocal communications, then presenting and publishing his findings. He holds a PhD in biological sciences in the field of animal behavior, and BS and MS degrees in wildlife management. Dr. Whitford has obtained the only documented recording, anywhere, of the alarm call of Canada geese. This, along with the alert Call, makes the GooseBuster the foremost goose repelling mechanism in the world.
