

Bed Bug ALERT™

MONITOR

Detect bedbugs before they bite
and *sleep tight!*

Bed Bugs are small parasitic insects. The most common type is *Cimex lectularius*. They hide away in cracks and crevices, making them hard to detect, and live by feeding exclusively on the blood of warm-blooded animals.

Bed Bug ALERT monitors detect bed bugs in beds, luggage, furniture, offices or anywhere. The proprietary chemical lure attracts the bed bugs into the monitor and traps them faster and more effectively than other devices.

The patented housing is secure, protecting the chemical lure, thereby making the product safe to use around children and pets. The monitor has a clear view window so the user can easily check to see if bed bugs have been detected and trapped. Can be checked and reinserted and reused easily where bed bugs are suspected. Durable plastic shells withstands weight, pressure and moisture while in use. Attracts both adult bed bugs and 2nd instar nymphs. For residential and institutional use.

Bedbugs take a bite out of businesses:

Bedbugs have crawled their way into every major city, and they are taking big bites out of the bottom line. **Bedbugs can appear anywhere – not just in hotels, dorms and nursing homes, but also offices, retail establishments, transportation – anywhere that has soft furnishings and people!**

THE COST OF BEDBUGS

- Visual or dog inspection can cost hundreds depending on the size of the facility
- Treatments/fumigation can cost thousands; may be charged per room; multiple visits are often required
- Replacing property such as furniture, linens, mattresses, carpets, curtains, etc.
- Medical expenses of those suffering from bedbug bites
- Legal fees from lawsuits filed by guests or employees
- Loss of reputation regarding the quality and sanitation of the establishment
- Being added to the online bedbug registry for all the world to see

Bed Bug ALERT™

Check for bedbugs BEFORE they strike!

Lures and captures adult bedbugs
and immature 2 instar nymphs -
shown magnified below:

BENEFITS OF **Bed Bug ALERT** MONITOR:

Use anywhere – Hotels, motels, offices, transit, hospitals, long term care facilities, school dorms, theatres, cruise ships, retail establishments. Available in case quantities.

Discreet – While the Bed Bug Alert is transparent for inspection, it is also near-invisible for discretion in public & private facilities & the hospitality industry.

Immediate call to action – No need to wait for a major problem to show itself – bed bugs are drawn into the Bed Bug Alert by environmentally sound bed bug lure; as soon as a bed bug shows up, act immediately to eliminate the infestation while it's minor.

Easy Removal – Replace as required, creating a long term, low cost monitoring program.

BEST PRODUCT ON THE MARKET:

- Proprietary chemical "lure" attracts bed bugs into monitors (other traps only mimic a "behavioral environment" to attempt attraction and do not even contain environmental lure!)
- Patented housing design allows for "clear view" of bed bugs - easy and quick to check; no training needed
- Plastic housing makes Bed Bug ALERT tamper-proof for children and pets (no direct exposure to glue nor bugs)
- Durable design allows expanded use in many areas including drawers, seating, luggage etc. (Inferior paper traps are crushed by heavy mattresses & narrow gaps between cushions, closing trap openings that bed bugs crawl into.)
- Captures both adult bed bugs and 2nd instar nymphs
- Made in the USA!

SPECIFICATIONS

Material: Clear plastic shell containing proprietary gel

Coverage: Use 1-4 per bed or other furniture. Lasts up to 6 months depending on conditions.

Available quantity: Case of 144 monitors. (Coming soon: retail packaging for retail distribution - 1 retail clamshell double-pack contains 2 Bed Bug ALERT monitors)
