Subject: Re: Bird-X, Inc. Newsletter May, 2003

I just wanted to let you know about your product's effectiveness around our house. For the past 7 years (during May and early June as the weather warms dramatically in our area of California) due to our house's high roofline we have been inundated with swallows. And are they messy ! We tried scare devices, vinegar, water spray, etc. Nothing seemed to stop those birds. They are relentless in their desire to roost under our eaves where they can build nests between the stucco and eaves.

Pretty much our last hope was your Bird-X Bird Repellant in 10 oz cartridges. In April we had our trusted painter apply about a 3/16" strip along the stucco, just under the eaves all the way around the house. Around May 1 some waves of swallows showed up but did not even leave so much as a spot of mud. Since then we have seen a few fly by, but as soon as they are close to the eaves they leave.

Thank you for providing a product that really does the job, and saves me from the job of cleaning up after our feathered friends.
