

REPEL GEESE and DUCKS from GRASS

with **GOOSECHASE™**

world's first biodegradable food-grade repellent for turf and grass

Stubborn, territorial, and aggressive geese destroy

your property, create unsightly conditions and cost you money! They love freshly-mown grass and crystal clear lakes at golf courses, parks, resorts, corporate landscapes and luxury residential complexes. Your property provides these once-migratory flocks with a permanent home: ideal feeding, nesting and drinking areas! Forget plastic swans and loud banging machines: until **GOOSECHASE**, nothing would persuade them to leave.

WHAT IS GOOSECHASE?

It's a food-grade taste aversion agent, made from a bitter, smelly derivative of concord grapes (active ingredient methyl anthranilate). It renders food sources unpalatable to geese.

HOW DOES IT WORK?

Geese leave treated areas for the long-term, as they can't habituate to the taste.

IS IT ENVIRONMENTALLY SAFE? YES.,

- EPA "reduced risk"
- Biodegradable
- Developed with USDA assistance
- FDA Generally Recognized as Safe (GRAS)

HOW DO I APPLY IT?

Dilute with water, 30:1 initial, 60:1 thereafter.*
Spray 60 gallons of mixture per acre onto dry grass. Reapply every 7-14 days or after mowing.

*In some cases, stronger application may be necessary.

HOW MUCH DOES IT COST?

One gallon is only **\$95⁰⁰**

MADE IN THE USA

GOOSECHASE is most effective when used synergistically as part of an integrated bird control program combining visual devices (Terror Eyes) and sound deterrents (GooseBusters) with taste aversions.
