

BIRD STROBE-LITE

Repel Pigeons And Other Bird Pests

with

Pulsing Strobe Explosions

The all-new MULTI-COLOR Stroboscopic BIRD-LITE from Bird-X chases birds off your property and keeps them away. BIRD-LITE sends out intimidating, intense white, red and blue light at 75 flashes per minute.

One-million-candlepower light pulses (and the frightening shadows they create) at this frequency are intolerable and disorienting to pigeons and other bird pests, causing them to fly away from the source of annoyance.

When installed at heights where pigeons and other bird pests normally roost, BIRD-LITE is barely noticeable to workers at ground level.

Cover up to 10,000 ft² per BIRD-LITE in factories, warehouses, barns, hangars, granaries or any large, dark or dimly-lit area where birds such as pigeons, sparrows and starlings create a nuisance.

Join hundreds of America's best-known firms who have solved their indoor pigeon problem easily and economically with the Bird-X BIRD-LITE.
