
Scout® Squirrel

KEEP SQUIRRELS AWAY FOR UP TO 30 DAYS – EVEN IN RAIN

Organic Squirrel Repellent: Repel squirrels with a formula that tastes like hot sauce, encouraging them to feed on *other* plants and shrubs. The active ingredients irritate squirrels' senses without harming them. They'll stay away long-term: squirrels are highly intelligent – they'll associate the taste discomfort with feeding activities and the immediate area, and will find another feeding and hiding spot.

Food grade capsaicin pepper offers protection of up to 30 days, instead of reapplying every one or two days with other products.

MICROENCAPSULATED - time-release squirrel protection, so each day is as effective as day one

WATER-RESISTANT - effective after several waterings and/or rains

Application: Identify favorite feeding and hiding spots. Spray (full strength) a heavy coat of Scout Squirrel Repellent on the target area and all around it (all paths to area including shrubs, feeder poles, eating spots, and grassy areas). Remember to spray the undersides of leaves and plants too.

Squirrels competing for food take longer to train to stay away. Be persistent. The greater the demand for food, the greater your consistent treatment is needed.

99.3% ORGANIC

All ingredients in Scout Squirrel are found on the EPA considered safe 4-A or 4-B lists.

Please note: This product cannot be sold to California customers.
