CHURCH • OF • CHRIST

September 25, 2001

Bird-X, Inc.  
300 North Elizabeth  
Chicago, Illinois 60607

Dear Aaron:

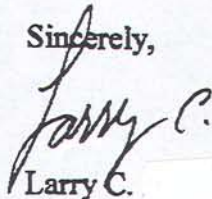

Richland Hills Church of Christ has a covered driveway at the east main entrance of our building. The structural design of the canopy made it an ideal nesting and roosting place for pigeons, starlings and sparrows. You know the mess associated with roosting and nesting. The sidewalks were covered with bird droppings and nesting materials. The entrance had to be power washed every week.

Sales literature on Bird-X, Inc.'s Quad blaster QB-4 Ultrasonic Bird Repeller came in the mail. After conferring with Bird-X, Inc.'s Customer Service about the application of the QB-4, one was ordered. The results have been phenomenal. Richland Hills Church of Christ no longer has bird problems under its east main entrance canopy.

Installation of a QB-4 is now planned for the west main entrance of Richland Hills Church of Christ in the near future.

Thank you for a good product.

Sincerely,

Larry C.  
Facilities Director
